CASE 2 – Viewer Retention in Diagnosing Engagement Pa

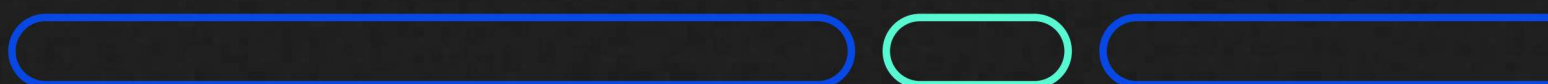

Context

A leading OTT streaming platform produces and distributes content across various genres. While the platform consistently achieves strong viewer engagement, it faces a significant business challenge:

@caciitg

Winter Con

About the Dataset

The dataset contains episode-level viewing, behavioral, and engagement data for a TV series on an OTT platform. It captures how episodes differ from each other during playback, and the resulting engagement outcomes.

Link for the dataset – [DATASET](#)

Your Role

You are engaged as a consultant to help the platform diagnose viewer drop-off and recommend actionable solutions.

Participants are expected to:

- Use the data to identify and validate problems
- Avoid assumptions not supported by analysis

@caciitg

Winter Con

Solution Design

Based on their findings, participants should propose **practical** recommendations that address the issues identified through the analysis.

Recommendations may include (but are not limited to):

- Changes to episode structuring or sequencing
- Product-level interventions to support viewer understanding
- Targeted actions for specific episode or content segments

All proposed solutions must:

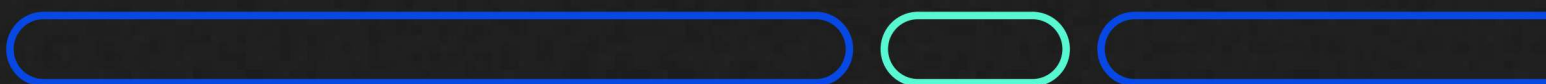

- Be clearly linked to insights derived from the data
- Be feasible within the context of an existing OTT platform

Prioritization and Risk Mitigation

@caciitg

Winter Con

Evaluation Criteria

Submissions will be evaluated based on:

- Depth and quality of data analysis
 - Clarity of problem diagnosis
 - Strength and logic of recommendations
 - Feasibility of proposed solutions
 - Ability to clearly link insights to actions
-
